

CERTIFICATE OF COMPLETION

Bunyarit Jerdrujikul

Basic Knowledge

This course introduces foundational principles of data security and transformation. It clarifies the distinctions between encoding, encryption, and hashing and explores the building blocks of modern cryptography. Topics include Symmetric and Asymmetric encryption, the Diffie-Hellman key exchange, and the role of Public Key Infrastructure (PKI). The curriculum also covers steganography and provides practical experience with classic ciphers like XOR, ROT13, and the Vigenère cipher to solidify core concepts.
